

Fessic's Mod List

Here they are. The latest collection of tweaks, enhancements, addons and texture replacers that comprise my own little Morrowind game world. You'll probably notice a general trend where tweak mods are positioned higher up in the list, with texture replacers and addons grouped further down. Think of this as a kind of introduction to Load Ordering, with the understanding that it may not be the best possible configuration - for this particular group of mods - but seems to work well enough...for me. *Highlighted mods are those not recommended to be cleaned with TESTool.* Since many texture replacers don't actually incorporate an esp (or plugin) file I've included them in a separate section at the end of the document.

Lastly, it's worth mentioning that not all of the mods listed here are conducive to screenshots, which is why you may notice this list and the Morrowind Mod screenshots folder don't precisely coincide. *Plus, there are some mods I just simply don't have screenshots for...After all these years I'm finally trying to stay focused on the main quest.*
